

PagePlus Keyboard

“The customised PagePlus Keyboard was created with the Microsoft Keyboard Layout Creator (ver 1.4) because the shortcuts available in PagePlus are rather limited and not always intuitive.

Although PagePlus allows users to assign almost any command to most key combinations, one cannot assign text characters, except for a those that are already on the menus.

The Windows PagePlus keyboard aims to improve on this. It is based on the Extended United Kingdom keyboard, which allows European users to type accented vowels using dead keys.

Important Note: This is a Windows keyboard and it will work system wide, not only in WebPlus and PagePlus, but in other applications such as WordPad. Select it from the Control Panel or the Language Bar in the System Tray. Key assignments in PagePlus or other programs will over-ride any in the Windows PagePlus keyboard.

Assigned Shortcuts

Ctrl+Alt + aeiou dfg hjklmnp rstw x = ãëïöü đfñhñk lmnprstŵ

Ctrl+Alt+Shift + AEIOU = ĀĒĪŌŪ ĐǼǼŃ ĹMŃPŔŖŢ
